AISS (AS Subscription) — 3,300 pairs removed
OPT (Optional) — 12 pairs removed

Net Effect vs. Jun 24 Baseline

Jun 24 baseline: 3,973,735 pairs / 1,556 GSPs. Jul 29 current: 3,993,496 pairs / 1,577 GSPs.
Net vs baseline: +19,761 pairs (+0.5%) and +21 GSPs — effectively back to the Jun 24 level.
The Jul 26 "legacy rationalization" (–25%, –293 GSPs) has been almost entirely reversed.
Of the 293 GSPs removed on Jul 26, approximately 240 (~82%) have been restored in the Jul 29 file.

Key Takeaways

1. Cisco reversed ~99% of the Jul 26 legacy GSP cleanup within 3 days — likely a rollback, not a planned change.
2. The mapping is now slightly larger than the Jun 24 baseline (+0.5%), with 21 net new GSPs.
3. Partners who adjusted service quoting based on the Jul 26 cleanup should revert — legacy GSPs are eligible again.
4. Only actual removals: AISS and OPT (3,312 pairs total) — minimal impact.
5. Book Date determines CPI eligibility — run your deal through AssetXpert on the booking date to confirm current rates.
6. Monitor for another update — this rapid reversal suggests the Jul 26 changes may have been premature or erroneous.
